

1. Consider the following method.

```
/** Precondition: arr contains only positive values.
 */
public static void doSome(int[] arr, int lim)
{
  int v = 0;
  int k = 0;
  while (k < arr.length && arr[k] < lim)
  {
    if (arr[k] > v)
    {
      v = arr[k]; /* Statement S */
    }
    k++; /* Statement T */
}
```

Assume that doSome is called and executes without error. Which of the following are possible combinations for the value of lim, the number of times *Statement* S is executed, and the number of times *Statement* T is executed?

Value of lim		Executions of Statement S	Executions of <u>Statement T</u>		
I.	5	0	5		
II.	7	4	9		
III.	3	5	2		

- (A) I only
- (B) II only
- (C) III only
- (D) I and III only
- (E) II and III only

**2.** Consider the following method.

```
public static void addOneToEverything(int[] numbers)
{
    for (int j = 0; j < numbers.length; j++)
        {
             numbers[j]++;
        }
}</pre>
```

Which of the following code segments, if any, can be used to replace the body of the method so that numbers will contain the same values?

```
for (int num : numbers)
{
    num++;
}

for (int num : numbers)
{
    num[j]++;
}

for (int num : numbers)
{
    numbers[num]++;
}
II.
```

- (A) I only
- (B) I and III only
- (C) II and III only
- (D) I, II, and III
- (E) None of the code segments will return an equivalent result.

3. Consider the following method. Method allEven is intended to return true if all elements in array arr are even numbers; otherwise, it should return false.

```
public boolean allEven(int[] arr)
{
  boolean isEven = /* expression */;
  for (int k = 0; k < arr.length; k++)
  {
    /* loop body */
  }
  return isEven;
}</pre>
```

Which of the following replacements for /\* expression \*/ and /\* loop body \*/ should be used so that method allEven will work as intended?

(A)

<u>/* expression */</u>	<u> </u>
false	if ((arr[k] % 2) == 0) isEven = true;

(B)

/* expression */	<u> </u>		
	if ((arr[k] % 2) != 0)		
fala a	isEven = false;		
false	else		
	isEven = true;		

(C)

/* expression */	<u>/* loop body */</u>
true	if ((arr[k] % 2) != 0)
	isEven = false;

(D)

# Lastname - Unit 6: Arrays 6.1,6.2,6.3,6.4 MCQ - Grade Sheet

<u>/* loop body */</u>		
if ((arr[k] % 2) != 0)		
isEven = false;		
else		
isEven = true;		

/\* expression\*/

if ((arr[k] % 2) == 0)

isEven = false;

true

else

isEven = true;

(E)

4. Consider the following instance variable and incomplete method. The method is intended to return a string from the array words that would be last alphabetically.

```
private String[] words;

public String findLastWord()
{
    /* missing implementation */
}
```

Assume that words has been initialized with one or more strings containing only lowercase letters. Which of the following code segments can be used to replace /\* missing implementation \*/ so that findLastWord will work as intended?

```
int maxIndex = 0;
    for (int k = 0; k < words.length; k++)
         if (words[k].compareTo(maxIndex) > 0)
(A)
             maxIndex = k;
    return words[maxIndex];
    int maxIndex = 0;
    for (int k = 1; k \le words.length; k++)
         if (words[k].compareTo(words[maxIndex]) > 0)
(B)
             maxIndex = k;
    return words[maxIndex];
    int maxIndex = 0;
    for (int k = 1; k < words.length; k++)
         if (words[k].compareTo(words[maxIndex]) > 0)
(C)
             maxIndex = k;
    return maxIndex;
    String maxWord = words[0];
    for (int k = 1; k < words.length; k++)
         if (words[k].compareTo(maxWord) > 0)
(D)
             maxWord = k;
    return maxWord;
    String maxWord = words[0];
    for (int k = 1; k < words.length; k++)
         if (words[k].compareTo(maxWord) > 0)
(E)
             maxWord = words[k];
    return maxWord;
```

5. In the following code segment, assume that the string str has been properly declared and initialized. The code segment is intended to print the number of strings in the array animals that have str as a substring.

```
String[] animals = {"horse", "cow", "goat", "dog", "cat", "mouse"};
int count = 0;
for (int i = 0; i <= animals.length; i++)
{
    if (animals[i].indexOf(str) >= 0)
      {
        count++;
    }
}
System.out.println(count);
```

The code segment does not work as intended. Which of the following changes should be made so the code segment works as intended?

- (A) The Boolean expression in the for loop header should be changed to i < animals.length.
- (B) The Boolean expression in the for loop header should be changed to i < animals.length 1.
- (C) The Boolean expression in the for loop header should be changed to i < animals[i].length.
- (D) The condition in the if statement should be changed to animals[i].equals(str).
- (E) The condition in the if statement should be changed to animals[i].substring(str).
- **6.** Consider the following incomplete method that is intended to return an array that contains the contents of its first array parameter followed by the contents of its second array parameter.

```
public static int[] append(int[] a1, int[] a2)
{
  int[] result = new int[a1.length + a2.length];
  for (int j = 0; j < a1.length; j++)
    result[j] = a1[j];

  for (int k = 0; k < a2.length; k++)
    result[ /* index */ ] = a2[k];

  return result;
}</pre>
```

Which of the following expressions can be used to replace /\* index \*/ so that append will work as intended?

- (A) j
- (B) k
- (C) k + a1.length 1
- (D) k + a1.length
- (E) k + a1.length + 1

7. Consider the following method.

```
public static void arrayMethod(int nums[])
{
   int j = 0;
   int k = nums.length - 1;

   while (j < k)
   {
      int x = nums[j];
      nums[j] = nums[k];
      nums[k] = x;
      j++;
      k--;
   }
}</pre>
```

Which of the following describes what the method arrayMethod() does to the array nums?

- (A) The array nums is unchanged.
- (B) The first value in nums is copied to every location in the array.
- (C) The last value in nums is copied to every location in the array.
- (D) The method generates an ArrayIndexOutOfBoundsException.
- (E) The contents of the array nums are reversed.

Directions: Select the choice that best fits each statement. The following question(s) refer to the following information.

Consider the following sort method. This method correctly sorts the elements of array data into increasing order.

- **8.** Assume that sort is called with the array {1, 2, 3, 4, 5, 6}. How many times will the expression indicated by /\* *Compare values* \*/ and the statement indicated by /\* *Assign to temp* \*/ execute?
  - (A) Compare values / Assign to temp 15/0
  - (B) Compare values / Assign to temp 15 / 5
  - (C) Compare values / Assign to temp 15 / 6
  - (D) Compare values / Assign to temp 21 / 5
  - (E) Compare values / Assign to temp 21 / 6
- 9. Assume that sort is called with the array  $\{6, 3, 2, 5, 4, 1\}$ . What will the value of data be after three passes of the outer loop (i.e., when j = 2 at the point indicated by / \* End of outer loop \* /)?
  - (A) {1, 2, 3, 4, 5, 6}
  - (B)  $\{1, 2, 3, 5, 4, 6\}$
  - (C)  $\{1, 2, 3, 6, 5, 4\}$
  - (D) {1, 3, 2, 4, 5, 6}
  - (E)  $\{1, 3, 2, 5, 4, 6\}$

**10.** Assume that the array arr has been defined and initialized as follows.

```
int[] arr = /* initial values for the array */;
```

Which of the following will correctly print all of the odd integers contained in arr but none of the even integers contained in arr?

```
for (int x : arr)
      if (x % 2 != 0)
(A)
         System.out.println(x);
    for (int k = 1; k < arr.length; k++)
      if (arr[k] % 2 != 0)
(B)
        System.out.println(arr[k]);
    for (int x : arr)
      if (x % 2 != 0)
(C)
        System.out.println(arr[x]);
    for (int k = 0; k < arr.length; k++)
      if (arr[k] % 2 != 0)
(D)
        System.out.println(k);
    for (int x : arr)
      if (arr[x] % 2 != 0)
(E)
```

System.out.println(arr[x]);

11. The following question is based on the following incomplete declaration of the class BoundedIntArray and its constructor definitions.

A BoundedintArray represents an indexed list of integers. In a BoundedIntArray the user can specify a size, in which case the indices range from 0 to size - 1. The user can also specify the lowest index, low, in which case the indices can range from low to low + size - 1.

```
public class BoundedIntArray
{
 private int[] myltems; // storage for the list
 private int myLowIndex; // lowest index
 public BoundedIntArray(int size)
 {
  myltems = new int[size];
  myLowIndex = 0;
 }
 public BoundedIntArray(int size, int low)
 {
  myltems = new int[size];
  myLowIndex = low;
 }
 // other methods not shown
}
```

Consider the following statements.

BoundedIntArray arrl = new BoundedIntArray(100, 5);

BoundedIntArray arr2 = new BoundedIntArray(100);

Which of the following best describes arrl and arr2 after these statements?

- (A) arrl and arr2 both represent lists of integers indexed from 0 to 99.
- (B) arrl and arr2 both represent lists of integers indexed from 5 to 104.
- (C) arrl represents a list of integers indexed from 0 to 104, and arr2 represents a list of integers indexed from 0 to 99.
- (D) arrl represents a list of integers indexed from 5 to 99, and arr2 represents a list of integers indexed from 0 to 99.
- (E) arrl represents a list of integers indexed from 5 to 104, and arr2 represents a list of integers indexed from 0 to 99.

12. The following question is based on the following incomplete declaration of the class BoundedIntArray and its constructor definitions.

A BoundedintArray represents an indexed list of integers. In a BoundedIntArray the user can specify a size, in which case the indices range from 0 to size - 1. The user can also specify the lowest index, low, in which case the indices can range from low to low + size - 1.

```
public class BoundedIntArray
{
 private int[] myltems; // storage for the list
 private int myLowIndex; // lowest index
 public BoundedIntArray(int size)
 {
  myltems = new int[size];
  myLowIndex = 0;
 }
 public BoundedIntArray(int size, int low)
 {
  myltems = new int[size];
  myLowIndex = low;
 }
 // other methods not shown
}
```

Which of the following is the best reason for declaring the data fields myItems and myLowIndex to be private rather than public?

- (A) This permits BoundedIntArray objects to be initialized and modified.
- (B) This permits BoundedIntArray methods to be written and tested before code that uses a BoundedIntArray is written.
- (C) This helps to prevent clients of the BoundedIntArray class from writing code that would need to be modified if the implementation of BoundedIntArray were changed.
- (D) This prevents compile-time errors whenever public methods are called that access the private data fields.
- (E) This prevents run-time errors whenever public methods are called that access the private data fields.

13. Consider the following instance variable and incomplete method. The method calcTotal is intended to return the sum of all values in vals.

```
private int[] vals;

public int calcTotal()
{
  int total = 0;

/* missing code */
  return total;
}
```

Which of the code segments shown below can be used to replace /\* missing code \*/ so that calcTotal will work as intended?

```
I. for (int pos = 0; pos < vals.length; pos++)
{
  total += vals[pos];
}

II. for (int pos = vals.length; pos > 0; pos--)
  {
  total += vals[pos];
}
```

```
III. int pos = 0;
while (pos < vals.length)
{
  total += vals[pos];
  pos++;

(A) I only
(B) II only
(C) III only
(D) I and III
(E) II and III</pre>
```

14. Consider the following two methods that appear within a single class.

```
public void changeIt(int[] list, int num)
{
 list = new int[5];
 num = 0;
 for (int x = 0; x < list.length; x++)
  list[x] = 0;
}
public void start()
{
 int[] nums = \{1, 2, 3, 4, 5\};
 int value = 6;
 changeIt(nums, value);
 for (int k = 0; k < nums.length; k++)
  System.out.print(nums[k] + " ");
 System.out.print(value);
}
```

What is printed as a result of the call start()?

- (A) 000000
- (B) 000006
- (C) 123456
- (D) 123450
- (E) changeIt will throw an exception.
- **15.** Consider the following instance variable and method.

```
private int[] array;

/** Precondition: array.length > 0
  */
public int checkArray()
{
  int loc = array.length / 2;
  for (int k = 0; k < array.length; k++)
  {
    if (array[k] > array[loc])
      {
       loc = k;
    }
  }
  return loc;
}
```

Which of the following is the best postcondition for checkArray?

- (A) Returns the index of the first element in array array whose value is greater than array [loc]
- (B) Returns the index of the last element in array array whose value is greater than array [loc]
- (C) Returns the largest value in array array
- (D) Returns the index of the largest value in array array
- (E) Returns the index of the largest value in the second half of array array

16. Consider the following incomplete method that is intended to return a string formed by concatenating elements from the parameter words. The elements to be concatenated start with startIndex and continue through the last element of words and should appear in reverse order in the resulting string.

For example, the following code segment uses a call to the concatWords method.

```
String[] things = {"Bear", "Apple", "Gorilla", "House", "Car"};
System.out.println(concatWords(things, 2));
```

When the code segment is executed, the string "CarHouseGorilla" is printed.

The following three code segments have been proposed as replacements for / \* missing code \* /.

```
I.
      for (int k = startIndex; k < words.length; k++)</pre>
        result += words[k] + words[words.length - k - 1];
II.
      int k = words.length - 1;
      while (k >= startIndex)
      {
        result += words[k];
        k--;
      }
III.
      String[] temp = new String[words.length];
      for (int k = 0; k \le words.length / 2; k++)
        temp[k] = words[words.length - k - 1];
        temp[words.length - k - 1] = words[k];
      for (int k = 0; k < temp.length - startIndex; k++)
        result += temp[k];
```

Which of these code segments can be used to replace /\* missing code \*/ so that concatWords will work as intended?

- (A) I only
- (B) II only
- (C) III only
- (D) I and II
- (E) II and III

17. Consider a shuffle method that is intended to return a new array that contains all the elements from nums, but in a different order. Let n be the number of elements in nums. The shuffle method should alternate the elements from nums  $[0] \dots nums[n/2-1]$  with the elements from nums $[n/2] \dots nums[n-1]$ , as illustrated in the following examples.

Example 1								
	0	1	2	3	4	5	6	7
nums	10	20	30	40	50	60	70	80
	0	1	2	3	4	5	6	7
result [	10	50	20	60	30	70	40	80
Example 2								
0.00	0	1	2	3	4	5	6	
nums [	10	20	30	40	50	60	70	
-	0	1	2	3	4	5	6	
result [	10	40	20	50	30	60	70	

The following implementation of the shuffle method does not work as intended.

```
public static int[] shuffle(int[] nums)
{
  int n = nums.length;
  int[] result = new int[n];

  for (int j = 0; j < n / 2; j++)
  {
    result[j * 2] = nums[j];
    result[j * 2 + 1] = nums[j + n / 2];
  }

  return result;
}</pre>
```

Which of the following best describes the problem with the given implementation of the shuffle method?

- (A) Executing shuffle may cause an ArrayIndexOutOfBoundsException.
- (B) The first element of the returned array (result [0]) may not have the correct value.
- (C) The last element of the returned array (result [result.length -1]) may not have the correct value.
- One or more of nums [0] ... nums [nums.length / 2 1] may have been copied to the wrong position(s) in the returned array.
- One or more of nums [nums.length / 2] ... nums[nums.length 1] may have been copied to the wrong position(s) in the returned array.
- **18.** Consider the following code segment from an insertion sort program.

```
for (int j = 1; j < arr.length; j++)
{
  int insertItem = arr[j];
  int k = j - 1;

  while (k >= 0 && insertItem < arr[k])
  {
    arr[k + 1] = arr[k];
    k--;
  }

  arr[k + 1] = insertItem;

  /* end of for loop */
}</pre>
```

Assume that array arr has been defined and initialized with the values  $\{5, 4, 3, 2, 1\}$ . What are the values in array arr after two passes of the for loop (i.e., when j = 2 at the point indicated by / \* end of for loop \* / )?

- (A)  $\{2, 3, 4, 5, 1\}$
- (B)  $\{3, 2, 1, 4, 5\}$
- (C)  $\{3, 4, 5, 2, 1\}$
- (D) {3, 5, 2, 3, 1}
- (E) {5, 3, 4, 2, 1}

**19.** Consider the following code segment.

```
int[] arr = {4, 2, 9, 7, 3};
for (int k : arr)
{
    k = k + 10;
    System.out.print(k + " ");
}
for (int k : arr)
System.out.print(k + " ");
```

What is printed as a result of executing the code segment?

- (A) 0123401234
- (B) 4297342973
- (C) 10 11 12 13 14 0 1 2 3 4
- (D) 14 12 19 17 13 4 2 9 7 3
- (E) 14 12 19 17 13 14 12 19 17 13
- **20.** Consider the following code segment.

```
int[] arr = {7, 2, 5, 3, 0, 10};
for (int k = 0; k < arr.length - 1; k++)
{
  if (arr[k] > arr[k + 1])
    System.out.print(k + " " + arr[k] + " ");
}
```

What will be printed as a result of executing the code segment?

- (A) 022330
- (B) 072533
- (C) 0725510
- (D) 173543
- (E) 725330

**21.** Consider the following code segment.

```
int[] arr = {1, 2, 3, 4, 5, 6, 7};
for (int k = 3; k < arr.length - 1; k++)
    arr[k] = arr[k + 1];</pre>
```

Which of the following represents the contents of arr as a result of executing the code segment?

- (A)  $\{1, 2, 3, 4, 5, 6, 7\}$
- (B)  $\{1, 2, 3, 5, 6, 7\}$
- (C)  $\{1, 2, 3, 5, 6, 7, 7\}$
- (D)  $\{1, 2, 3, 5, 6, 7, 8\}$
- (E)  $\{2, 3, 4, 5, 6, 7, 7\}$

Directions: Select the choice that best fits each statement. The following question(s) refer to the following incomplete class declaration.

```
public class TimeRecord
  private int hours;
  private int minutes; // 0 < minutes < 60
  /** Constructs a TimeRecord object.
       @param h the number of hours
               Precondition: h \ge 0
      @param m the number of minutes
               Precondition: 0 \le m < 60
   */
  public TimeRecord(int h, int m)
    hours = h;
    minutes = m;
  /** @return the number of hours
  public int getHours()
  { /* implementation not shown */ }
  /** @return the number of minutes
       Postcondition: 0 ≤ minutes < 60
  public int getMinutes()
  { /* implementation not shown */ }
  /** Adds h hours and m minutes to this TimeRecord.
       @param h the number of hours
               Precondition: h \ge 0
     @param m the number of minutes
               Precondition: m \ge 0
  public void advance(int h, int m)
    hours = hours + h;
    minutes = minutes + m;
    /* missing code */
  // Other methods not shown
```

22. Consider the following declaration that appears in a class other than TimeRecord.

```
TimeRecord [] timeCards = new TimeRecord [100];
```

Assume that timeCards has been initialized with TimeRecord objects. Consider the following code segment that is intended to compute the total of all the times stored in timeCards.

```
TimeRecord total = new TimeRecord(0,0);
for (int k = 0; k < timeCards.length; k++)
{
    /* missing expression */;
}</pre>
```

Which of the following can be used to replace / \* missing expression \* / so that the code segment will work as intended?

**23.** Consider the following instance variable and method.

```
private int[] arr;

/** Precondition: arr.length > 0
   * @return the largest value in array arr
   */
public int findMax()
{
   int maxVal = 0;
   for (int val : arr)
   {
      if (val > maxVal)
      {
        maxVal = val;
      }
   }
   return maxVal;
}
```

Method findMax is intended to return the largest value in the array arr. Which of the following best describes the conditions under which the method findMax will not work as intended?

- (A) The largest value in arr occurs only once and is in arr[0].
- (B) The largest value in arr occurs only once and is in arr[arr.length 1].
- (C) The largest value in arr is negative.
- (D) The largest value in arr is zero.
- (E) The largest value in arr occurs more than once.

**24.** Consider the following instance variable and method.

```
private int[] numbers;

public void mystery(int x)
{
  for (int k = 1; k < numbers.length; k = k + x)
     {
      numbers[k] = numbers[k - 1] + x;
     }
}</pre>
```

Assume that numbers has been initialized with the following values.

```
{17, 34, 21, 42, 15, 69, 48, 25, 39}
```

Which of the following represents the order of the values in numbers as a result of the call mystery(3)?

- (A) {17, 20, 21, 42, 45, 69, 48, 51, 39}
- (B) {17, 20, 23, 26, 29, 32, 35, 38, 41}
- (C) {17, 37, 21, 42, 18, 69, 48, 28, 39}
- (D) {20, 23, 21, 42, 45, 69, 51, 54, 39}
- (E) {20, 34, 21, 45, 15, 69, 51, 25, 39}

**25.** Consider the following instance variable and method.

```
private int[] numbers;

/** Precondition: numbers contains int values in no particular order.

*/
public int mystery(int num)
{
   for (int k = numbers.length - 1; k >= 0; k--)
   {
     if (numbers[k] < num)
     {
       return k;
     }
   }
   return -1;
}</pre>
```

Which of the following best describes the contents of numbers after the following statement has been executed?

int m = mystery(n);

- (A) All values in positions 0 through m are less than n.
- (B) All values in positions m+1 through numbers.length-1 are less than n.
- (C) All values in positions m+1 through numbers.length-1 are greater than or equal to n.
- (D) The smallest value is at position m.
- (E) The largest value that is smaller than n is at position m.

26. Consider the following instance variable, arr, and incomplete method, partialSum. The method is intended to return an integer array sum such that for all k, sum [k] is equal to arr[0] + arr[1] + ... + arr[k]. For instance, if arr contains the values {1, 4, 1, 3}, the array sum will contain the values {1, 5, 6, 9}.

```
private int[] arr;
public int[] partialSum()
{
  int[] sum = new int[arr.length];
  for (int j = 0; j < sum.length; j++)
  {
    sum[j] = 0;
  }
  /* missing code */
  return sum;
}</pre>
```

The following two implementations of / \* missing code \* / are proposed so that partialSum will work as intended.

```
Implementation 1
```

```
for (int j = 0; j < arr.length; j++)
{
   sum[j] = sum[j - 1] + arr[j];
}</pre>
```

#### Implementation 2

```
for (int j = 0; j < arr.length; j++)
{
  for (int k = 0; k <= j; k++)
  {
    sum[j] = sum[j] + arr[k];
  }
}</pre>
```

Which of the following statements is true?

- (A) Both implementations work as intended, but implementation 1 is faster than implementation 2.
- (B) Both implementations work as intended, but implementation 2 is faster than implementation 1.
- (C) Both implementations work as intended and are equally fast.
- (D) Implementation 1 does not work as intended, because it will cause anArrayIndexOutOfBoundsException.
- (E) Implementation 2 does not work as intended, because it will cause an Array Index Out Of Bounds Exception.

**27.** Consider the following method.

```
public static int mystery(int[] arr)
{
  int x = 0;
  for (int k = 0; k < arr.length; k = k + 2)
      x = x + arr[k];
  return x;
}</pre>
```

Assume that the array nums has been declared and initialized as follows.

```
int [] nums = \{3, 6, 1, 0, 1, 4, 2\};
```

What value will be returned as a result of the call mystery(nums)?

- (A) 5
- (B) 6
- (C) 7
- (D) 10
- (E) 17

**28.** Consider the following method.

```
/** Precondition: arr.length > 0 */
public static int mystery(int[] arr)
  int index = 0;
  int count = 0;
  int m = -1;
  for (int outer = 0; outer < arr.length; outer++)
  {
    count = 0;
    for (int inner = outer + 1; inner < arr.length; inner++)
      if (arr[outer] == arr[inner])
      {
        count++;
    if (count > m)
      index = outer;
      m = count;
  }
  return index;
}
```

Assume that nums has been declared and initialized as an array of integer values. Which of the following best describes the value returned by the call mystery(nums)?

- (A) The maximum value that occurs in nums
- (B) An index of the maximum value that occurs in nums
- (C) The number of times that the maximum value occurs in nums
- (D) A value that occurs most often in nums
- (E) An index of a value that occurs most often in nums

**29.** Consider the following method, isSorted, which is intended to return true if an array of integers is sorted in nondecreasing order and to return false otherwise.

```
/** @param data an array of integers
  * @return true if the values in the array appear in sorted (nondecreasing) order
  */
public static boolean isSorted(int[] data)
{
   /* missing code */
}
```

Which of the following can be used to replace /\* missing code \*/ so that isSorted will work as intended?

```
I. for (int k = 1; k < data.length; k++)</p>
      if (data[k - 1] > data[k])
        return false;
    return true;
   for (int k = 0; k < data.length; k++)
II.
      if (data[k] > data[k + 1])
        return false;
    return true;
III.
   for (int k = 0; k < data.length - 1; k++)
      if (data[k] > data[k + 1])
        return false;
      else
        return true;
    }
    return true;
```

- (A) I only
- (B) II only
- (C) III only
- (D) I and II only
- (E) I and III only

**30.** Consider the following method that is intended to return the sum of the elements in the array key.

```
public static int sumArray(int[] key)
{
  int sum = 0;
  for (int i = 1; i <= key.length; i++)
  {
    /* missing code */
  }
  return sum;
}</pre>
```

Which of the following statements should be used to replace / \* missing code \* / so that sumArray will work as intended?

- (A) sum = key [i];
- (B) sum += key [i-1];
- (C) sum += key [ i ];
- (D) sum += sum + key[i 1];
- (E) sum += sum + key [i];

**31.** Consider the following method that is intended to return true if an array of integers is arranged in decreasing order and return false otherwise.

```
/** @param nums an array of integers

* @return true if the values in the array appear in decreasing order

* false otherwise

*/

public static boolean isDecreasing(int[] nums)

{

/* missing code */
}
```

Which of the following can be used to replace /\* missing code \*/ so that isDecreasing will work as intended?

```
I. for (int k = 0; k < nums.length; k++)
{
     if (nums[k] <= nums[k + 1])
        return false;
}
return true;

II. for (int k = 1; k < nums.length; k++)</pre>
```

```
if (nums[k-1] \le nums[k])
             return false;
        }
        return true;
  III. for (int k = 0; k < nums.length - 1; k++)
        {
            if (nums[k] \le nums[k+1])
               return false;
            else
               return true;
        }
        return true;
(A) I only
(B) II only
(C) III only
(D) I and III
```

(E) II and III

32.

The following code segment appears in another method in the same class.

```
int[] values = {5, 2, 1, 3, 8};
mystery(values);
for (int v : values)
   System.out.print(v + " ");
System.out.println();
```

What is printed as a result of executing the code segment?

- (A) 52138
- (B) 573411
- (C) 5 7 8 11 19
- (D) 734118
- (E) Nothing is printed because an ArrayIndexOutOfBoundsException is thrown during the execution of method mystery.

33. Consider the problem of finding the maximum value in an array of integers. The following code segments are proposed solutions to the problem. Assume that the variable arr has been defined as an array of int values and has been initialized with one or more values.

```
int max = Integer.MIN_VALUE;
for (int value : arr)
  if (max < value)
    max = value;
int max = 0;
boolean first = true;
for (int value : arr)
  if (first)
    max = value;
    first = false;
  else if (max < value)
    max = value;
}
int max = arr[0];
for (int k = 1; k < arr.length; k++)
  if (max < arr[k])
    max = arr[k];
  }
}
```

Which of the code segments will always correctly assign the maximum element of the array to the variable max?

- (A) I only
- (B) II only
- (C) III only
- (D) II and III only
- (E) I, II, and III

34. Consider an integer array nums, which has been properly declared and initialized with one or more values. Which of the following code segments counts the number of negative values found in nums and stores the count in counter?

```
I. int counter = 0;
   int i = -1;
   while (i <= nums.length - 2)
      i++;
      if (nums[i] < 0)
      {
          counter++;
II. int counter = 0;
   for (int i = 1; i < nums.length; i++)
      if (nums[i] < 0)
          counter++;
      }
III. int counter = 0;
   for (int i : nums)
      if (nums[i] < 0)
          counter++;
   }
```

- (A) I only
- (B) II only
- (C) I and II only
- (D) I and III only
- (E) I, II, and III

35. Consider the following method, which is intended to return the number of *local maximum* values in an array. Local maximum values are array elements that are greater than both adjacent array elements. The first and last elements of an array have only a single adjacent element, so neither the first nor the last array element is counted by this method. For example, an array containing the values {3, 9, 7, 4, 10, 12, 3, 8} has two local maximum values: 9 and 12.

```
public static int countPeaks(int[] data)
{
    int numPeaks = 0;
    for ( /* missing loop header */ )
    {
        unmPeaks++;
        }
    }
    return numPeaks;
}
```

Which of the following can replace /\* missing loop header \*/ so the method countPeaks works as intended?

```
(A) int p = data.length - 1; p > 0; p--
```

- (B) int p = 0; p < data.length; <math>p++
- (C) int p = 0; p < data.length 1; p++
- (D) int p = 1; p < data.length; p++
- (E) int p = 1; p < data.length 1; p++
- **36.** Consider the following method.

```
public void changeIt(int[] arr, int index, int newValue)
{
    arr[index] += newValue;
}
```

Which of the following code segments, if located in a method in the same class as changeIt, will cause the array myArray to contain {0, 5, 0, 0}?

```
(A) int[] myArray = new int[4];
  changeIt(myArray, 1, 5);
```

- (B) int[] myArray = new int[4]; changeIt(myArray, 2, 5);
- (C) int[] myArray = new int[4];
  changeIt(myArray, 5, 1);
- (D) int[] myArray = new int[5]; changeIt(myArray, 1, 4);
- (E) int[] myArray = new int[5];
  changeIt(myArray, 1, 5);

37. The method countTarget below is intended to return the number of times the value target appears in the array arr. The method may not work as intended.

```
public int countTarget(int[] arr, int target)
{
    int count = 0;
    for (int j = 0; j <= arr.length; j++) // line 4
    {
        if (arr[j] == target)
        {
            count++;
        }
    }
    return count;
}</pre>
```

Which of the following changes, if any, can be made to line 4 so that the method will work as intended?

- (A) Changing int j = 0; to int j = 1;
- (B) Changing j <= arr.length; to j < arr.length;</p>
- (C) Changing j <= arr.length; to j < arr.length 1;</p>
- (D) Changing j <= arr.length; to j < arr.length + 1;
- (E) No change is necessary; the method works correctly as is.
- **38.** Consider the following code segment, which is intended to print the sum of all elements of an array.

```
int[] arr = {10, 5, 1, 20, 6, 25};
int sum = 0;
for (int k = 0; k <= arr.length; k++)
{
     sum += arr[k];
}
System.out.println("The sum is " + sum);</pre>
```

A runtime error occurs when the code segment is executed. Which of the following changes should be made so that the code segment works as intended?

- (A) The for loop header should be replaced with for (int k = 0; k < arr.length; k++).
- (B) The for loop header should be replaced with for (int k = 0;  $k \le arr.length$ ; k--).
- (C) The for loop header should be replaced with for (int k = 1;  $k \le arr.length 1$ ; k++).
- (D) The statement in the body of the for loop should be replaced with sum += arr[0].
- (E) The statement in the body of the for loop should be replaced with sum += arr[k-1].

Consider the following instance variable nums and method findLongest with line numbers added for reference. Method findLongest is intended to find the longest consecutive block of the value target occurring in the array nums; however, findLongest does not work as intended.

For example, if the array nums contains the values [7, 10, 10, 15, 15, 15, 15, 10, 10, 10, 10, 10, 10], the call findLongest (10) should return 3, the length of the longest consecutive block of 10s.

```
private int[] nums;
    public int findLongest(int target)
        int lenCount = 0;
        int maxLen = 0;
Line 1:
        for (int val : nums)
Line 2:
Line 3:
          if (val == target)
Line 4:
Line 5:
             lenCount++;
Line 6:
Line 7:
          else
Line 8:
Line 9:
             if (lenCount > maxLen)
Line 10:
Line 11:
               maxLen = lenCount;
Line 12:
Line 13:
Line 14:
Line 15: if (lenCount > maxLen)
Line 16:
Line 17:
          maxLen = lenCount;
Line 18:
Line 19: return maxLen;
```

- **39.** The method findLongest does not work as intended. Which of the following best describes the value returned by a call to findLongest?
  - (A) It is the length of the shortest consecutive block of the value target in nums.
  - (B) It is the length of the array nums.
  - (C) It is the number of occurrences of the value target in nums.
  - (D) It is the length of the first consecutive block of the value target in nums.
  - (E) It is the length of the last consecutive block of the value target in nums.
- **40.** Which of the following changes should be made so that method findLongest will work as intended?
  - (A) Insert the statement lenCount = 0; between lines 2 and 3.
  - (B) Insert the statement lenCount = 0; between lines 8 and 9.
  - (C) Insert the statement lenCount = 0; between lines 10 and 11.
  - (D) Insert the statement lenCount = 0; between lines 11 and 12.
  - (E) Insert the statement lenCount = 0; between lines 12 and 13.
- 41. The following incomplete method is intended to return the largest integer in the array numbers.

```
// precondition: numbers.length > 0

public static int findMax(int[]numbers)
{
    int posOfMax = O;
    for (int index = 1; index < numbers.length; index++)
    {
        if ( /*condition*/ )
        {
            /* statement */
        }
      }
      return numbers[posOfMax];
}</pre>
```

Which of the following can be used to replace /\* condition \*/ and /\* statement \*/ so that findMax will work as intended?

(A)	/* condition */		/* statement */		
	numbers[index] > numbers[pos(	OfMax]	posOfMax = numbers[index	];	
(B)	/* condition */		/* statement */		
	numbers[index] > numbers[	posOfMax = index;			
(C)	/* condition */		/* statement */		
	numbers[index] > posOfMax	po	posOfMax = numbers[index]		
(D)	/* condition */	/* statement */			
	numbers[index] < posOfMax	posOfMax = numbers[index];			
(E)	/* condition */		/* statement */		
	numbers[index] < numbers	[posOfMax]	posOfMax = index;		

42. Consider the mode method, which is intended to return the most frequently occurring value (mode) in its int[] parameter arr. For example, if the parameter of the mode method has the contents {6, 5, 1, 5, 2, 6, 5}, then the method is intended to return 5.

```
/** Precondition: arr.length >= 1 */
public static int mode(int[] arr)
     int modeCount = 1;
     int mode = arr[0];
     for (int j = 0; j < arr.length; <math>j++)
         int valCount = 0;
         for (int k = 0; k < arr.length; k++)
             if ( /* missing condition 1 */ )
        valCount++;
         }
         if ( /* missing condition 2 */ )
            modeCount = valCount;
            mode = arr[j];
     }
     return mode;
}
```

Which of the following can replace /\* missing condition 1 \*/ and /\* missing condition 2 \*/ so the code segment works as intended?

(A)	/* missing condition 1 */	/* missing condition 2 */		
(A)	arr[j] == arr[k]	valCount > modeCount		

(B)	/* missing condition 1 */	/* missing condition 2 */		
	arr[j] == arr[k]	modeCount > valCount		

(C)	/* missing condition l */	/* missing condition 2 */		
(C)	arr[j] != arr[k]	valCount > modeCount		

(D)	/* missing condition l */	/* missing condition 2 */		
( )	arr[j] != arr[k]	modeCount > valCount		

(E)	/* missing condition 1 */	/* missing condition 2 */		
(E)	arr[j] != arr[k]	modeCount != valCount		

43. Consider the following incomplete method. Method findNext is intended to return the index of the first occurrence of the value val beyond the position start in array arr.

```
// returns index of first occurrence of val in arr
// after position start;
// returns arr.length if val is not found
public int findNext(int[] arr, int val, int start)
{
   int pos = start + 1;

   while ( /* condition */ )
     pos++;

   return pos;
}
```

For example, consider the following code segment.

```
int[] arr = \{11, 22, 100, 33, 100, 11, 44, 100\};
```

System.out.println(findNext(arr, 100, 2));

The execution of the code segment should result in the value 4 being printed.

Which of the following expressions could be used to replace /\* condition \*/ so that findNext will work as intended?

- (A) (pos < arr.length) && (arr[pos] != val)
- (B) (arr[pos]!= val) && (pos < arr.length)
- (C) (pos < arr.length) || (arr[pos] != val)
- (D) (arr[pos] == val) && (pos < arr.length)
- (E) (pos < arr.length) || (arr[pos] == val)

Consider the following method.

```
public static String[] strArrMethod(String[] arr)
{
    String[] result = new String[arr.length];
    for (int j = 0; j < arr.length; j++)
    {
        String sm = arr[j];
        for (int k = j + 1; k < arr.length; k++)
        {
            if (arr[k].length() < sm.length())
            {
            sm = arr[k]; // Line 12
            }
        }
        result[j] = sm;
    }
    return result;
}</pre>
```

**44.** Consider the following code segment.

```
String[] testOne = {"first", "day", "of\", "spring"};
String[] resultOne = strArrMethod(testOne);
```

What are the contents of resultOne when the code segment has been executed?

```
(A) {"day", "first", "of\", "spring"}
```

- (B) {"of\", "day", "first", "spring"}
- (C) {"of\", "day", "of\", "spring"}
- (D) {"of\", "of\", "of\", "spring"}
- (E) {"spring", "first", "day", "of\"}

**45.** Consider the following code segment.

```
String[] testTwo = {"last", "day", "of\", "the", "school", "year"};
String[] resultTwo = strArrMethod(testTwo);
```

How many times is the line labeled // Line 12 in the strArrMethod executed as a result of executing the code segment?

- (A) 4 times
- (B) 5 times
- (C) 6 times
- (D) 15 times
- (E) 30 times
- **46.** Consider the code segment below, where arr is a one-dimensional array of integers.

```
int sum = 0;
for (int n : arr)
{
    sum = sum + 2 * n;
}
System.out.print(sum);
```

Which of the following code segments will produce the same output as the code segment above?

```
int sum = 0;
    for (int k = 0; k < arr.length; k++)
(A)
         sum = sum + 2 * k;
    System.out.print(sum);
    int sum = 0;
    for (int k = 0; k \le arr.length; k++)
(B)
         sum = sum + 2 * k;
    System.out.print(sum);
    int sum = 0;
    for (int k = 1; k \le arr.length; k++)
(C)
         sum = sum + 2 * k;
    System.out.print(sum);
    int sum = 0;
    for (int k = 0; k < arr.length; k++)
(D)
         sum = sum + 2 * arr[k];
    System.out.print(sum);
    int sum = arr[0];
    for (int k = 1; k \le arr.length; k++)
(E)
         sum = sum + 2 * arr[k];
    System.out.print(sum);
```

47. The code segment below is intended to print the length of the shortest string in the array wordArray. Assume that wordArray contains at least one element.

```
int shortest = /* missing value */;
for (String word : wordArray)
{
    if (word.length() < shortest)
      {
        shortest = word.length();
      }
}
System.out.println(shortest);</pre>
```

Which of the following should be used as the initial value assigned to shortest so that the code segment works as intended?

- (A) Integer.MAX VALUE
- (B) Integer.MIN VALUE
- **(C)** 0
- (D) word.length()
- (E) wordArray.length
- **48.** Assume that an array of integer values has been declared as follows and has been initialized.

$$int[] arr = new int[10];$$

Which of the following code segments correctly interchanges the value of arr[0] and arr[5]?

- (A) arr[0] = 5;arr[5] = 0;
- (B) arr[0] = arr[5];arr[5] = arr[0];

int 
$$k = arr[5]$$
;

(C) arr[0] = arr[5]; arr[5] = k;

$$int k = arr[0];$$

(D) arr[0] = arr[5];arr[5] = k;

int 
$$k = arr[5]$$
;

- (E) arr[5] = arr[0];
- arr[0] = arr[0];arr[0] = arr[5];

**49.** Consider the following data field and method.

```
private int[] seq;
        // precondition: seq.length > 0
        public int lenIncreasing()
        {
          int k = 1;
          while ((k < seq.length) \&\& (seq[k - 1] < seq[k]))
          {
            k++;
          }
          // assertion
          return k;
        }
Which of the following assertions is true when execution reaches the line // assertion in lenIncreasing? (A) (k = seq.length) & (seq[k-1] > seq[k])
 (B) (k == \text{seq.length}) \parallel (\text{seq}[k - 1] >= \text{seq}[k])
 (C) (k \le \text{seq.length}) \&\& (\text{seq}[k-1] \le \text{seq}[k])
 (D) (k \le \text{seq.length}) \parallel (\text{seq}[k-1] \le \text{seq}[k])
        (k == seq.length) \parallel (seq[k-1] == seq[k])
```

#### 50. The following question refer to the following information.

Consider the following data field and method. Method maxHelper is intended to return the largest value among the first numVals values in an array; however, maxHelper does not work as intended.

```
private int[] nums;

// precondition: 0 < numVals <= nums.length
  private int maxHelper(int numVals)
  {
   Line 1: int max = maxHelper(numVals - 1);

   Line 2: if (max > nums[numVals - 1])
      return max;
   else
      return nums[numVals - 1];
   }
```

Which of the following best describes the conditions under which maxHelper does not work as intended? (A) When num vals is 1

- (B) When numVals is even
- (C) When the elements of nums are in nonincreasing order
- (D) When the elements of nums are in nondecreasing order
- (E) Method maxHelper never works as intended.

#### 51. The following question refer to the following information.

Consider the following data field and method. Method maxHelper is intended to return the largest value among the first numVals values in an array; however, maxHelper does not work as intended.

```
private int[] nums;
          // precondition: 0 < numVals <= nums.length
          private int maxHelper(int numVals)
          {
      Line 1: int max = maxHelper(numVals - 1);
      Line 2: if (max > nums[numVals - 1])
             return max;
            else
             return nums[numVals - 1];
          }
Which of the following corrects the method maxHelper so that it works as intended? Insert the following statement before Line 1.
        if (numVals == 0)
 (A)
         return numVals;
      Insert the following statement before Line 1.
        if (numVals == 1
 (B)
         return nums[0];
      Insert the following statement between Line 1 and Line 2.
        if (numVals == 0)
 (C)
         return numVals;
      Insert the following statement between Line 1 and Line 2.
 (D)
        if (numVals == 1)
         return nums[0];
      Insert the following statement between Line 1 and Line 2.
        if (numVals < 2)
 (E)
         return numVals;
```

**52.** Consider the following class definition.

```
public class Book
{
    private int pages;
    public int getPages()
    {
        return pages;
    }
    // There may be instance variables, constructors, and methods not shown.
}
```

The following code segment is intended to store in maxPages the greatest number of pages found in any Book object in the array bookArr.

```
Book[] bookArr = { /* initial values not shown */ };
int maxPages = bookArr[0].getPages();
for (Book b : bookArr)
{
     /* missing code */
}
```

Which of the following can replace /\* missing code \*/ so the code segment works as intended?

```
if (b.pages > maxPages)
(A)
         maxPages = b.pages;
    if (b.getPages() > maxPages)
(B)
         maxPages = b.getPages();
    }
    if (Book[b].pages > maxPages)
(C)
         maxPages = Book[b].pages;
    if (bookArr[b].pages > maxPages)
(D)
         maxPages = bookArr[b].pages;
    }
    if (bookArr[b].getPages() > maxPages)
(E)
         maxPages = bookArr[b].getPages();
```

53. On Sunday night, a meteorologist records predicted daily high temperatures, in degrees Fahrenheit, for the next seven days. At the end of each day, the meteorologist records the actual daily high temperature, in degrees Fahrenheit. At the end of the seven-day period, the meteorologist would like to find the greatest absolute difference between a predicted temperature and a corresponding actual temperature.

Consider the following method, which is intended to return the greatest absolute difference between any pair of corresponding elements in the int arrays pred and act.

```
/** Precondition: pred and act have the same non-zero length. */
public static int diff(int[] pred, int[] act)
{
    int num = Integer.MIN_VALUE;
    for (int i = 0; i < pred.length; i++)
    {
        /* missing code */
    }
    return num;
}</pre>
```

Which of the following code segments can be used to replace /\* missing code \*/ so that diff will work as intended?

```
if (pred[i] < act[i])
(A)
         num = act[i] - pred[i];
    if (pred[i] > act[i])
(B)
         num = pred[i] - act[i];
    }
    if (pred[i] - act[i] > num)
(C)
         num = pred[i] - act[i];
    if (Math.abs(pred[i] - act[i]) < num)</pre>
(D)
         num = Math.abs(pred[i] - act[i]);
    if (Math.abs(pred[i] - act[i]) > num)
(E)
         num = Math.abs(pred[i] - act[i]);
```

54. Consider the following incomplete method, which is intended to return the longest string in the string array words. Assume that the array contains at least one element.

```
public static String longestWord(String[] words)
{
    /* missing declaration and initialization */
    for (int k = 1; k < words.length; k++)
    {
        if (words[k].length() > longest.length())
        {
            longest = words[k];
        }
    }
    return longest;
}
```

Which of the following can replace /\* missing declaration and initialization \*/ so that the method will work as intended?

```
(A) int longest = 0;
```

- (B) int longest = words[0].length();
- (C) String longest = "";
- (D) String longest = words[0];
- (E) String longest = words[1];

55. The following sort method correctly sorts the integers in elements into ascending order

```
Line 1:
        public static void sort(int[] elements)
Line 2:
Line 3:
           for (int j = 0; j < elements.length - 1; <math>j++)
Line 4:
Line 5.
              int index = j;
Line 6:
Line 7:
              for (int k = j + 1; k < elements.length; k++)
Line 8:
Line 9:
                if (elements[k] < elements[index])
Line 10:
Line 11:
                   index = k;
Line 12:
Line 13:
Line 14:
Line 15:
              int temp = elements[j];
Line 16:
              elements[j] = elements[index];
Line 17:
              elements[index] = temp;
Line 18:
Line 19:
```

Which of the following changes to the sort method would correctly sort the integers in elements into descending order?

```
I. Replace line 9 with:
   Line 9:
                   if (elements[k] > elements[index])
II. Replace lines 15–17 with:
   Line 15:
                  int temp = elements[index];
   Line 16:
                  elements[index] = elements[j];
   Line 17:
                  elements[j] = temp;
III. Replace line 3 with:
   Line 3:
              for (int j = elements.length - 1; j > 0; j--)
   and replace line 7 with:
   Line 7:
                 for (int k = 0; k < j; k++)
```

- (A) I only
- (B) II only
- (C) I and II only
- (D) I and III only
- (E) I, II, and III
- **56.** Consider the following code segment.

```
int[] arr = {1, 2, 3, 4, 5, 6, 7};
for (int i = 1; i < arr.length; i += 2)
{
    arr[i] = arr[i - 1];
}</pre>
```

Which of the following represents the contents of the array arr after the code segment is executed?

- (A)  $\{0, 1, 2, 3, 4, 5, 6\}$
- (B) {1, 1, 1, 1, 1, 1, 1}
- (C) {1, 1, 3, 3, 5, 5, 7}
- (D) {1, 2, 3, 4, 5, 6, 7}
- (E)  $\{2, 2, 4, 4, 6, 6, 7\}$
- **57.** Consider the following method.

```
public static int mystery(int value)
{
    int sum = 0;
    int[] arr = {1, 4, 2, 5, 10, 3, 6, 4};

    for (int item : arr)
    {
        if (item > value)
        {
            sum += item;
        }
     }
     return sum;
}
```

What value is returned as a result of the call mystery (4) ?

- (A) 6
- (B) 15
- (C) 21
- (D) 29
- (E) 35

**58.** Consider the following method.

```
public static int mystery(int[] arr)
{
    int count = 0;
    int curr = arr[arr.length - 1];

    for (int value : arr)
    {
        if (value > curr)
        {
            count = count + 1;
        }
        else
        {
            count = count - 1;
        }
        curr = value;
    }

    return count;
}
```

The following code segment appears in another method of the same class.

```
int[] arr = {4, 14, 15, 3, 14, 18, 19};
System.out.println(mystery(arr));
```

What is printed as a result of executing the code segment?

- (A) -7
- (B) -6
- (C) 3
- (D) 5
- **(E)** 7

**59.** Consider the following method.

```
// precondition: arr contains no duplicates;
//
           the elements in arr are in sorted order;
//
           0 \le \text{low} \le \text{arr.length}; low - 1 \le \text{high} < \text{arr.length}
public static int mystery(int[] arr, int low, int high, int num)
 int mid = (low + high) / 2;
 if (low > high)
  return low;
 else if (arr[mid] < num)
 {
  return mystery(arr, mid + 1, high, num);
 else if (arr[mid] > num)
 {
  return mystery(arr, low, mid - 1, num);
 else // arr{mid] == num
  return mid;
```

}

How many calls to mystery (including the initial call) are made as a result of the call mystery(arr, 0, arr.length - 1, 14) if arr is the following array?

	0	1	2	3	4	5	6	7
arr	11	13	25	26	29	30	31	32

- (A) 1
- (B) 2
- (C) 4
- (D) 7
- (E) 8

60. The question refer to the following data field and method.

```
private int[] arr;
// precondition: arr.length > 0
public void mystery()
{
 int sl = 0;
 int s2 = 0;
 for (int k = 0; k < arr.length; k++)
 {
  int num = arr[k];
  if ((num > 0) && (num % 2 == 0))
   sl += num;
  else if (num < 0)
    s2 += num;
 }
 System.out.println(s1);
 System.out.println(s2);
}
```

Which of the following best describes the value of s1 output by the method mystery?

- (A) The sum of all positive values in arr
- (B) The sum of all positive even values in arr
- (C) The sum of all positive odd values in arr
- (D) The sum of all values greater than 2 in arr
- (E) The sum of all values less than 2 in arr

61. The question refer to the following data field and method.

```
private int[] arr;
// precondition: arr.length > 0
public void mystery()
{
 int sl = 0;
 int s2 = 0;
 for (int k = 0; k < arr.length; k++)
 {
  int num = arr[k];
  if ((num > 0) && (num % 2 == 0))
   sl += num;
  else if (num < 0)
    s2 += num;
 }
 System.out.println(s1);
 System.out.println(s2);
}
```

Which of the following best describes the value of s2 output by the method mystery?

- (A) The sum of all positive values in arr
- (B) The sum of all positive even values in arr
- (C) The sum of all negative values in arr
- (D) The sum of all negative even values in arr
- (E) The sum of all negative odd values in arr

**62.** Consider the following code segment.

```
int[] numbers = new int[5];
numbers[0] = 2;
numbers[1] = numbers[0] + 1;
numbers[numbers[0]] = numbers[1];

for (int x = 3; x < numbers.length; x++)
{
    numbers[x] = numbers[x - 1] * 2;
}</pre>
```

Which of the following represents the contents of the array numbers after the code segment is executed?

```
(A) \{2, 3, 0, 0, 0\}
```

- (B)  $\{2, 3, 1, 2, 4\}$
- (C) {2, 3, 3, 6, 9}
- (D) {2, 3, 3, 6, 12}
- (E) {2, 4, 8, 16, 32}
- **63.** Consider the following method.

```
public int[] addNum(int[] array, int first, int second, int num)
{
    int[] newArray = new int[array.length];
    newArray[first] = array[first] + num;
    newArray[second] = array[second] + num;
    return newArray;
}
```

Which of the following code segments, appearing in the same class as the addNum method, will result in array2 having the contents {0, 0, 13, 0, 9, 0, 0}?

```
(A) int[] array1 = {5, 2, 8, 6, 4, 3, 9};
int[] array2 = addNum(array1, 2, 4, 5);
```

- (B)  $int[] array1 = \{-5, -5, 13, 0, 9, 0, 0\};$ int[] array2 = addNum(array1, 2, 4, 5);
- (C) int[] array1 = {5, 2, 8, 6, 4, 3, 9}; int[] array2 = addNum(array1, 3, 5, 5);
- (D) int[] array1 = {5, 8, 2, 4, 6, 3, 9}; int[] array2 = addNum(array1, 2, 4, 5);
- (E)  $int[] array1 = \{0, -5, 8, 0, 9, 0, 0\};$ int[] array2 = addNum(array1, 2, 4, 5);

**64.** Consider the following method, which is intended to return the average (arithmetic mean) of the values in an integer array. Assume the array contains at least one element.

```
public static double findAvg(double[] values)
{
    double sum = 0.0;
    for (double val : values)
    {
        sum += val;
    }
    return sum / values.length;
}
```

Which of the following preconditions, if any, must be true about the array values so that the method works as intended?

- (A) The array values must be sorted in ascending order.
- (B) The array values must be sorted in descending order.
- (C) The array values must have only one mode.
- (D) The array values must not contain values whose sum is not 0.
- (E) No precondition is necessary; the method will always work as intended.
- **65.** Consider the following method.

```
public static int getValue(int[] data, int j, int k)
{
    return data[j] + data[k];
}
```

Which of the following code segments, when appearing in another method in the same class as getValue, will print the value 70 ?

```
(A) int arr = {40, 30, 20, 10, 0};
System.out.println(getValue(arr, 1, 2));
```

- (B) int[] arr = {40, 30, 20, 10, 0}; System.out.println(getValue(arr, 1, 2));
- (C) int[] arr = {50, 40, 30, 20, 10};
  System.out.println(getValue(arr, 1, 2));
- (D) int arr = {40, 30, 20, 10, 0}; System.out.println(getValue(arr, 2, 1));
- (E) int arr = {50, 40, 30, 20, 10}; System.out.println(getValue(arr, 2, 1));

**66.** Consider the following recursive method.

```
/** Precondition: 0 <= numVals <= nums.length */
public static int mystery(int[] nums, int v, int numVals)
{
    if (numVals == 0)
    {
        return 0;
    }
    else if (v == nums[numVals - 1])
    {
        return 1 + mystery(nums, v, numVals - 1);
    }
    else
    {
        return mystery(nums, v, numVals - 1);
    }
}</pre>
```

Which of the following best describes the value returned by the call mystery (nums, v, nums.length) ?

- (A) The value 0 is returned.
- (B) The value 1 is returned.
- (C) The number of times that v occurs in nums is returned.
- (D) The number of times that numVals occurs in nums is returned.
- (E) Nothing is returned. A runtime error occurs because of infinite recursion.
- 67. Consider the following method, which is intended to return an array of integers that contains the elements of the parameter arr arranged in reverse order. For example, if arr contains {7, 2, 3, -5}, then a new array containing {-5, 3, 2, 7} should be returned and the parameter arr should be left unchanged.

```
public static int[] reverse(int[] arr)
{
    int[] newArr = new int[arr.length];
    for (int k = 0; k < arr.length; k++)
    {
        /* missing statement */
    }
    return newArr;
}</pre>
```

Which of the following statements can be used to replace /\* missing statement \*/ so that the method works as intended?

```
(A) newArray[k] = arr[-k];
```

- (B) newArray[k] = arr[k arr.length];
- (C) newArray[k] = arr[k arr.length 1];
- (D) newArray[k] = arr[arr.length k];
- (E) newArray[k] = arr[arr.length k 1];

**68.** Consider the static method **selectSort** shown below. Method **selectSort** is intended to sort an array into increasing order; however, it does not always work as intended.

```
// precondition: numbers.length > 0
   // postcondition: numbers is sorted in increasing order
   public static void selectSort(int[] numbers)
   {
     int temp;
Line 1: for (int j = 0; j < numbers.length - 1; j++)
     {
Line 2:
         int pos = 0;
Line 3:
         for (int k = j + 1; k < numbers.length; k++)
                {
           if (numbers[k] < numbers[pos])
Line 4:
                    {
Line 5:
            pos = k;
                    }
                }
      temp = numbers[j];
      numbers[j] = numbers[pos];
     numbers[pos] = temp;
     }
   }
```

Which of the following changes should be made so that selectSort will work as intended?

- (A) Line 1 should be changed to for (int j = 0; j < numbers.length 2; j++)
- (B) Line 2 should be changed to int pos = j;
- (C) Line 3 should be changed to for (int k = 0; k < numbers.length; k++)
- (D) Line 4 should be changed to if (numbers[k] > numbers[pos])
- (E) Line 5 should be changed to k = pos;

69. The following incomplete method is intended to sort its array parameter arr in increasing order.

```
// postcondition: arr is sorted in increasing order
public static void sortArray(int[] arr)
{
 int j, k;
 for (j = arr.length - 1; j > 0; j--)
 {
  int pos = j;
  for ( /* missing code */ )
  {
    if (arr[k] > arr[pos])
    {
     pos = k;
    }
  }
  swap(arr, j, pos);
}
```

Assume that swap(arr, j, pos) exchanges the values of arr[j] and arr[pos]. Which of the following could be used to replace /\* missing code \*/ so that executing the code segment sorts the values in array arr?

}

- (A) k = j 1; k > 0; k--
- (B) k = j 1; k >= 0; k--
- (C) k = 1; k < arr.length; k++
- (D) k = 1; k > arr.length; k++
- (E) k = 0;  $k \le arr.length$ ; k++

**70.** Consider the following method.

```
public static void sort(String[] arr)
{
 for (int pass = arr.length - 1; pass >= 1; pass--)
 {
   String large = arr[0];
   int index = 0;
  for (int k = 0; k \le pass; k++)
   {
    if ((arr[k].compareTo(large)) > 0)
    {
     large = arr[k];
     index = k;
    }
  }
   arr[index] = arr[pass];
   arr[pass] = large;
 }
}
```

Assume arr is the following array.

Alli Wilk Walt Lisa Shall Jose Walt Dill		"Ann"	"Mike"	"Walt"	"Lisa"	"Shari"	"Jose"	"Mary"	"Bill"
--	--	-------	--------	--------	--------	---------	--------	--------	--------

What is the intermediate value of arr after two iterations of the outer for loop in the call sort(arr)?

(A)	"Ann"	"Mike"	"Walt"	"Lisa"	"Shari"	"Jose"	"Mary"	"Bill"
(B)	"Ann"	"Mike"	"Lisa"	"Shari"	"Jose"	"Mary"	"Bill"	"Walt"
(C)	"Ann"	"Bill"	"Jose"	"Lisa"	"Mary"	"Mike"	"Shari"	"Walt"
(D)	"Ann"	"Mike"	"Bill"	"Lisa"	"Mary"	"Jose"	"Shari"	"Walt"
(E)	"Walt"	"Shari"	"Ann"	"Lisa"	"Mike"	"Jose"	"Mary"	"Bill"

Consider an integer array, nums, which has been declared and initialized with one or more integer values. Which of the following code segments updates nums so that each element contains the square of its original value?

```
I.
int k = 0;
while (k < nums.length)</pre>
{
     nums[k] = nums[k] * nums[k];
for (int k = 0; k < nums.length; k++)
{
     nums[k] = nums[k] * nums[k];
                                       III.
for (int n : nums)
     n = n * n;
```

- (A) II only
- (B) I and II only
- (C) I and III only
- (D) II and III only
- (E) I, II, and III

72. Consider the following incomplete method, which is intended to return the sum of all the elements in its array parameter.

```
/** Precondition: data.length > 0 */
public static int total(int[] data)
{
    int result = 0;
    /* missing code */
    return result;
}
```

The following code segments have been proposed to replace /\* missing code \*/.

Which of the replacements for /\* missing code \*/ could be used so that total will work as intended?

- (A) I only
- (B) II only
- (C) III only
- (D) I and II
- (E) II and III

73. Consider the following code segment, which traverses two integer arrays of equal length. If any element of arr1 is smaller than the corresponding (i.e., at the same index) element of minArray, the code segment should replace the element of minArray with the corresponding element of arr1. After the code segment executes, minArray should hold the smaller of the two elements originally found at the same indices in arr1 and minArray and arr1 should remain unchanged.

```
for (int c = 0; c < arr1.length; c++)
{
     if (arr1[c] < minArray[c])
     {
     arr1[c] = minArray[c];
     }
     else
     {
     minArray[c] = arr1[c];
     }
}</pre>
```

Which of the following changes will ensure that the code segment always works as intended?

- (A) Changing the Boolean expression in line 1 to c <= arr1.length
- (B) Changing the relational operator in line 3 to >
- (C) Removing lines 5–8
- (D) Swapping the positions of line 5 and line 9
- (E) Removing lines 7–10
- **74.** Consider the following code segment.

```
boolean[] oldVals = {true, false, true, true};
boolean[] newVals = new boolean[4];
for (int j = oldVals.length - 1; j >= 0; j--)
{
    newVals[j] = !(oldVals[j]);
}
```

What, if anything, will be the contents of newVals as a result of executing the code segment?

- (A) {true, true, false, true}
- (B) {true, false, true, true}
- (C) {false, true, false, false}
- (D) {false, false, true, false}
- (E) The array newVals will not contain any values because the code segment does not compile.

**75.** Consider the following method.

The following code segment appears in another method of the same class.

```
int[] numbers = {45, 1, 56, 10};
methodX(numbers);
```

Which of the following represents the contents of the array numbers after the code segment is executed?

- (A) {1, 1, 10, 10}
- (B) {1, 10, 45, 56}
- (C) {45, 1, 56, 10}
- (D) {45, 45, 56, 45}
- (E) {56, 45, 10, 1}
- 76. The twoInARow method below is intended to return true if any two consecutive elements of the parameter arr are equal in value and return false otherwise.

```
public boolean twoInARow(int[] arr)
{
    /* missing loop header */
    if (arr[k] == arr[k + 1])
        {
        return true;
        }
    }
    return false;
}
```

Which of the following can be used to replace /\* missing loop header \*/ so that the method will work as intended?

```
(A) for (int k = 0; k < arr.length - 1; k++)
(B) for (int k = 0; k < arr.length; k++)
(C) for (int k = 1; k < arr.length; k++)
(D) for (int k = arr.length - 1; k >= 0; k--)
(E) for (int k = arr.length - 1; k > 0; k--)
```

Consider the following code segment.

```
int[] arr = {1, 2, 4, 0, 3};
for (int i : arr)
     System.out.print(i);
```

Which of the following code segments will produce the same output as the code segment above?

```
I.
  int[] arr = {1, 2, 4, 0, 3};
  for (int i : arr)
        System.out.print(arr[i]);
                                          II.
  int[] arr = {1, 2, 4, 0, 3};
  for (int i = 0; i < arr.length; i++)
        System.out.print(i);
                                          III.
  int[] arr = {1, 2, 4, 0, 3};
  for (int i = 0; i < arr.length; i++)</pre>
        System.out.print(arr[i]);
(B) III only
```

- (A) I only
- (C) I and II only
- (D) I and III only
- (E) I, II, and III

**78.** Consider the following code segment.

```
int[] arr = {3, 1, 0, 4, 2};
for(int j = 0; j < arr.length; j++)
{
         System.out.print(arr[j] + j + " ");
}</pre>
```

What, if anything, is printed as a result of executing the code segment?

- (A) 3 1 0 4 2
- (B) 3 2 2 7 6
- (C) 6 2 0 8 4
- (D) 7 2 3 6 2
- (E) Nothing is printed, because an ArrayIndexOutOfBoundsException is thrown.
