**Cybersecurity Guided Notes**

Lesson 4.6.2 - Multifactor Authentication (MFA)

Name: _____ **Class:** _____ **Date:** _____

1. What is Multifactor Authentication (MFA), and how does it enhance security compared to traditional authentication methods?

2. Describe the role of biometrics in authentication and provide examples of common biometric factors.

3. What are authentication tokens, and how do they contribute to enhancing security?

CYB≡R.ORG

4. Explain the concept of security keys and their significance in authentication.

5. Differentiate between "something you know," "something you have," and "something you are" authentication factors.

6. How does Multifactor Authentication contribute to regulatory compliance and security standards?

CYBER.ORG

7. Discuss the role of location-based verification in authentication and its significance in modern security practices.
